

Data Contained in the “TaxCurrent” Access Database

The Access database called “Taxcurrent_mmddyyyy.mdb” contains a table named TaxKeyDetail. This table contains the actual data from the County’s tax assessment database which can be associated with the GIS parcel map system. The TaxKey field can be “related” to the Tax Parcels in the GIS database using ArcGIS software as outlined in the TaxRelatesSetup.pdf

The fields in the TaxCurrent database are displayed below. Special note should be taken of the following fields:

- 1) “FileDate” which indicates the currency date of the data contained in the table
- 2) “TaxYear” which indicates whether the record existed at the beginning of the year and was taxed (displays current year) or if record is a new parcel which will not be added to roll until next year (displays next year).
